***FORTREX IS A NEW LINE
BY BASE PROTECTION
WHICH ENSURES COMPLETE
PROTECTION DURING
THE MOST DEMANDING
APPLICATIONS.***

Thanks to a revolutionary technology system and innovative materials, Fortrex provides protection and comfort, flexibility and stability, cushioning and firmness.

***FOR THE MOST DEMANDING
APPLICATIONS IN THE
HARDEST CONDITIONS.***

- » HEAVY INDUSTRY
- » BUILDING
- » LARGE CONSTRUCTION;
RAILWAYS, BRIDGES, ROADS, ETC.
- » MINES
- » FARMING
- » SYLVICULTURE
- » OIL&GAS

FOR T REX

EXTENDED PROTECTION

LOWER PROTECTION

①

In the rear part of the sole, there is an **ultra-resistant rigid insert** of **W** shape.

Thanks to the shape and the composite material, the barrier **can divert and warp nails avoiding perforation**, protecting, therefore, the foot from below and from the side, 2 nails of a diameter of 3 mm too.

①

②

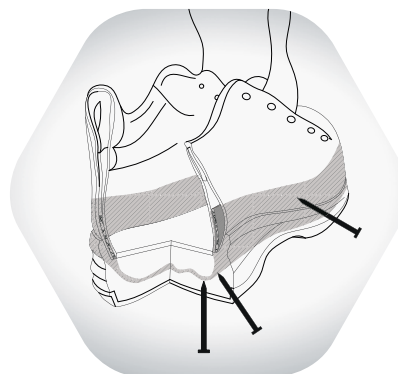

②

In the front part of the sole, the new-generation **flexible ballistic fabric** ensures resistance to perforation, without affecting movements of the foot.

SIDE PROTECTION

The protection system against accidental cutting and perforation risks starts from below and extends laterally along the perimeter of the shoe.

UNEQUALLED COMFORT

Excellent fit, breathable materials and insulating technology against hot and cold temperatures.

Fortrex is designed to always feel comfortable, even in tough environments and adverse weather conditions.

Performance and Comfort: always together.

"V" ZONE

FLEXIBLE AREA TO SUPPORT STRETCHING.

The ballistic fabric in the front part of the sole provides a high level of elasticity and flexibility, allowing the shoe **to support movements and stretching of the foot**, even retaining a barrier against the perforation caused by nails of 3 mm too.

MAXIMUM FLEXIBILITY

***COMFORT
& OVERALL
PROTECTION.
ANYWHERE.***

FOR T REX

ENHANCED STABILITY

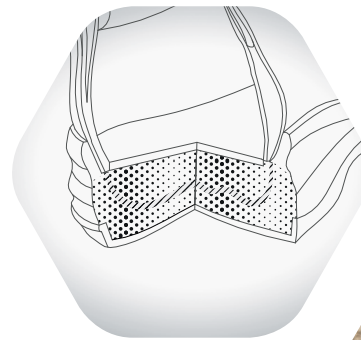

Fortrex is equipped with an ultra-resistant rigid insert in the rear part which provides maximum stability to the rear foot part as well as torsion resistance in the medial area.

The result is an incredible **enveloping sensation in the tarsal area, ensuring maximum control during each movement.**

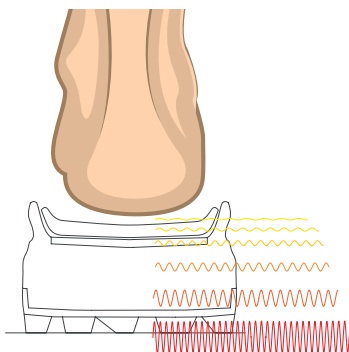

SUPERIOR CUSHIONING

The ultra-resistant rigid shell is inserted between the two soft viscoelastic material layers to ensure an **extra cushioning effect** and to absorb high-impact energies in the heel whilst relieving pressures on the joints.

VIBRATION ABSORPTION

The sole is made of layers of different consistency and thickness in order to soften vibrations, protecting the spinal column and the joints.

Vibration reduction

FIRMNESS & DURABILITY

The sole is made of polyurethane and rubber to ensure maximum resistance. The upper is designed in a single piece to avoid lacerations and the integrated toe-cup into the sole protects the toe from abrasion even in the most extreme situations.

What is the result? Extreme durability and high performance in the most demanding conditions.
